

1. I did it!
2. As I type a word and press enter. It duplicates the line.
3. A short summary about mars shows up. It showed it on the terminal without opening a new window. It is an email that was sent by Mike ones in 1997.
4. It wrote a file called *new.txt*. It printed what I wrote in the file
- 5.
- 6.
- 7.
8. Declare 'use std::io;'
9. let mut buffer = String::new();
10. buffer.read_line(&mut buffer)?
11. println!
12. fn main() -> io::Result<()>
- 13.
14. It would be `object.method()`
15. An empty buffer is returned '
16. .
17. .
18. .
19. .
20. I am confused about what is the difference between println!() and print!()
 - a. Println automatically adds a newline character at the end of the text. I guess i was more confused on what it was trying to do in question 17. It completely changed my code when I did regular print!()
